VIJAY JOSHI

Frontend Engineer | React.js · TypeScript · Redux · Next.js | AI Features & SDK Integrations

Pune, India · +91 70666 76446 · vijaymjoshi04@gmail.com · linkedin.com/in/the-vijay-joshi · github.com/thevijayjoshi · vijayjoshi.vercel.app

PROFESSIONAL SUMMARY

Frontend Engineer with 3+ years of experience building production React.js and TypeScript applications for US healthcare SaaS (EHR, telehealth, billing) and a banking platform used by 150+ banks. Specialize in scalable frontend architecture, complex dynamic forms, state management with Redux Toolkit and React Query, third-party SDK integrations and AI-powered product features. Currently lead frontend work on a greenfield EHR platform and mentor junior developers.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, HTML5, CSS3
Frameworks	React.js (18, 19), Next.js, React Router, Vite, Node.js
State Management	Redux Toolkit, Redux-Saga, Redux Persist, TanStack React Query, Zustand, Context API
UI & Forms	Material UI, Tailwind CSS, Shadcn UI, Radix UI, Design Systems, Responsive Design, React Hook Form, Zod, Yup
APIs & Real-Time	REST APIs, OpenAPI / Swagger, Orval, Axios, WebSockets, Socket.IO
AI & LLM	AWS Bedrock (Claude), OpenAI API, Generative AI, Prompt Engineering, Claude Code, Cursor AI
SDKs & Auth	Zoom Meeting SDK, Stripe, Twilio, Jitsi, Keycloak, Auth0, JWT, RBAC
Testing & Tools	Jest, Vitest, React Testing Library, Playwright, Git, CI/CD, Agile / Scrum
Performance	Code Splitting, Lazy Loading, Virtualized Lists, Query Caching, Optimistic Updates

EXPERIENCE

Software Engineer (Frontend) **Nov 2024 – Present**

Thinkitive Technologies Pvt. Ltd. *Pune, India*

- Delivered **scheduling** (calendar and list views, dual time zones, recurring appointments, availability search) and a **billing suite** for claims, denials, payments and appeals, with lazy-loaded routes and virtualized data tables.
- Built a **schema-driven form engine** (plugin registry, versioned schemas, expression engine for conditional logic) and a **no-code assessment builder** with scoring, severity bands, per-answer colours and a standard instrument library (PHQ-9, GAD-7), powering clinical assessments, e-signature consents and onboarding wizards across patient and provider portals.
- Built a **type-safe API layer with Orval**, generating TypeScript clients and React Query hooks from the OpenAPI specs of 4 microservices (per-service Axios instance, tenant header), replacing hand-written API calls.
- Built the **frontend for AI features on AWS Bedrock (Claude)**: AI-drafted treatment plans pre-filled into an editable form for clinician review and sign-off (never auto-saved), AI episode summary cards, an AI daily brief dashboard and AI task summaries, with loading, error and fallback states.
- Owned the **Stripe billing and payments frontend** (autopay, invoices, statements with PDF export) and **real-time provider–patient messaging over Socket.IO** across a 7-portal EHR.
- Integrated **Zoom Meeting SDK** for telehealth video, Twilio Conversations and Jitsi for real-time communication, and Keycloak and Auth0 for authentication.
- Built and published a **shared component library** (Radix UI, Tailwind CSS) and 15+ multi-step dynamic forms; built Next.js features for organization branding and RBAC.
- Lead frontend work on a greenfield EHR from discovery to delivery and **mentor junior developers**; received the **Above and Beyond award (2025)** for ownership and delivery.

Software Developer **Jul 2023 – Oct 2024**

Sutradhar Project Consultancy Pvt. Ltd. *Pune, India*

- Worked on a multi-tenant **Core Banking System built on React.js and Redux**, used by 150+ banks across India.
- Built reusable React component libraries published as internal npm packages via AWS CodeArtifact, and admin panels with MFA login and role-based access.

EDUCATION

Bachelor of Engineering (Mechanical), Savitribai Phule Pune University **2022 | CGPA 8.47**
