PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience building production-grade healthcare SaaS for US providers, covering EHR, telehealth and revenue cycle management. Frontend depth in React.js, TypeScript and Redux; backend ownership in Node.js and NestJS on a microservices architecture with PostgreSQL, MongoDB and Kafka, using AWS services such as Bedrock, SES and S3. Build multi-tenant platforms with RBAC, audit logging and HIPAA-safe generative AI features with Claude and OpenAI, and currently lead technical work across frontend and backend on an EHR platform.

TECHNICAL SKILLS

Frontend	React.js, Next.js, TypeScript, JavaScript (ES6+), Redux Toolkit, React Query
Backend	Node.js, NestJS, Express.js, REST APIs, Microservices, OpenAPI / Swagger, TypeORM
Data & Messaging	PostgreSQL, MongoDB, Redis, Apache Kafka, Socket.IO, WebSockets
Cloud & DevOps	AWS (Bedrock, SES, S3, CodeArtifact), Docker, NGINX, CI/CD, Sentry, OpenTelemetry
Auth & Security	OAuth 2.0 / OIDC, Keycloak, Auth0, JWT, RBAC, Multi-Tenancy, Audit Logging, HIPAA Compliance
Integrations	Stripe, Authorize.Net, Twilio, Zoom Meeting SDK, Jitsi, Zoho CRM
Testing & Tools	Jest, Vitest, React Testing Library, Playwright, Git, Postman, Claude Code, Agile / Scrum

EXPERIENCE

Software Engineer (Full Stack) **Nov 2024 – Present**
Thinkitive Technologies Pvt. Ltd. *Pune, India*

- Took a **behavioral health EHR and billing platform** from discovery, estimation and user stories into active development; lead technical work across frontend and backend and mentor junior developers.
- Built **multi-tenant backend foundations** in NestJS and PostgreSQL: per-tenant database provisioning, role-based access control (RBAC) and an audit trail with field-level change tracking.
- Built **HIPAA-compliant generative AI on AWS Bedrock (Claude)**: treatment-plan drafting and patient episode summaries with strict JSON output schemas, feature flags with offline fallbacks, and cost-tiered model routing.
- Built the **scheduling system end to end**: availability search, recurring appointments, time-zone-safe rules, event-driven reminders over Kafka with tenant-branded AWS SES emails, and calendar sync through an ICS feed.
- Built a **schema-driven form engine and no-code assessment builder** (scoring, severity bands, PHQ-9/GAD-7 library) with server-side scoring in NestJS, typed React Query SDKs for 4 microservices generated with **Orval**, a claims, ERA and denials billing suite, and Zoom Meeting SDK telehealth in React 19 and TypeScript.
- Made **LLM features multi-tenant** on an AI clinician platform (Node.js microservices, MongoDB, NATS): organization-scoped prompt execution, AI configuration and session summaries.
- Built **per-organization secret management** with GCP Secret Manager over NATS for OpenAI, Stripe, Authorize.Net and OneSignal credentials, and **automated subdomain provisioning** for new organizations.
- Delivered a **Stripe billing and payments module** (autopay, invoices, statements) and **real-time messaging over Socket.IO** with Jitsi telehealth links across a 7-portal EHR; built and published a shared React component library.
- Built care-plan workflows and monitoring dashboards for a **remote patient monitoring platform**, with real-time chat on the Twilio Conversations SDK.
- Received the **Above and Beyond award (2025)** for ownership and delivery.

Software Developer **Jul 2023 – Oct 2024**
Sutradhar Project Consultancy Pvt. Ltd. *Pune, India*

- Worked on a multi-tenant **Core Banking System built on React.js and Redux**, used by 150+ banks across India.
- Built reusable React component libraries published as internal npm packages via AWS CodeArtifact, and admin panels with MFA login and role-based access.

EDUCATION

Bachelor of Engineering (Mechanical), Savitribai Phule Pune University **2022 | CGPA 8.47**
